

# Foil Transfer Art (Markers & Water Printing)

## Supplies:

- Tin foil
- Plain computer paper or colouring pages (cardstock is not recommended— it tends to wrinkle)
- Washable markers
- Spray bottle filled with water

## Instructions:

### 1. Prepare the Foil

- Tear a piece of tin foil slightly larger than your paper
- Place the foil shiny side up on the table
- Smooth it flat with your hands

### 2. Draw on the Foil

- Use washable markers to draw directly onto the foil
- Bold shapes and thick lines work best

### 3. Transfer the Design

- Lightly spray the foil with water
  - Light sprays create a soft, speckled pattern
  - More water or spraying from the side creates a smoother, rainbow-like effect

- Place the paper face down onto the wet, marker-covered foil

- Gently press the paper with your hands

### 4. Reveal the Artwork

- Carefully lift the paper straight up
- Enjoy your soft, watercolor-style mirror image
